ISRAEL EXPORT INSTITUTE

Inspired by Innovation, Connected and Coordinated.

**The Israel Export Institute**, in cooperation with the **Israel Trade Mission to Seoul, South Korea,** invites Israeli cyber firms to explore partnership opportunities with leading Operational Technology companies and to learn about the scope and avenues for expansion into the South Korean market.

The **Israel Export Institute (IEI)** represents more than 500 exporting companies in the cyber security sector. Israeli cyber companies offer technologically advanced, field-proven products and solutions that rank among the most innovative in the world. These companies successfully partner with leading global players to ensure public safety and protect critical infrastructure, financial institutions, enterprises of all sizes, ports, hospitals, retailers, and more. The sector works closely with public and governmental bodies, their agencies, and the private sector, fostering joint ventures and international partnerships that advance innovation and security worldwide.

Discover Israel's Cyber Security Industry with IEI.

# Dream

DREAM

The trusted sovereign partner for national AI and cyber resilience.

https://www.dreamgroup.com/

## Categories

- Cloud and Infrastructure Security
- Network Security
- IoT
- Security Operations and Orchestration
- LLM
- AI

## Profile

Dream builds the systems that allow nations to govern their most critical assets, entirely within their own borders, under their own control, on their own terms.
Our Sovereign stack is built to rigorously understand what a nation needs to become prosperous, secure, and resilient. Become the national brain, and make it happen.

The Products:
Hero- 0-Day Vulnerability Defender. Finds 0-day vulnerabilities in national infrastructure before adversaries do.
Sphere- National Cyber AI. An integrative and adaptable Cyber Platform that gives visibility and control in full sovereignty.
Atlas- National Sovereign AI. Turns any Sovereign Data into operational action.

Data, intelligence, and AI infrastructure have become the terrain on which sovereignty is either built - or surrendered. This is our new reality: Nation-states that control their AI can shape their people's future. And those that don't, won't.

Sovereign AI is not a luxury. It is the defining capability of the next era. Dream was built for the nations that refuse to be dependent. We build sovereign AI systems that are: Local. Fully controlled. Autonomously-customized. Deeply integrated. And aligned with the unique needs, ambitions, and identity of each nation.

Dream turns sovereign AI into sovereign power, and enables nations to become super-nations.

# Silverfort

Stop AI-powered attacks with inline, runtime controls that protect every identity.

www.silverfort.com

## Categories

- Cloud and Infrastructure Security
- Anti-Fraud
- Authentication and IAM
- OT and Industrial Control System
- Security Operations and Orchestration
- AI
- Identity Security

## Profile

Silverfort secures every dimension of identity — human, machine, and AI — across on-prem, cloud, and hybrid environments.

Powered by an AI-driven access control engine, we deliver the first autonomous identity security platform capable of making and enforcing decisions at runtime. It is easy to deploy and won't disrupt business operations, resulting in better security outcomes with less work.

Discover every identity, analyse exposures to reduce your identity attack surface, and enforce inline identity security controls to stop lateral movement, ransomware, and emerging AI-powered attacks.

# Heqa security

Quantum-safe networking solutions for critical infrastructure and enterprises.

www.heqa-sec.com

## Categories

- Network Security

## Profile

HEQA Security develops quantum-safe communication solutions that protect sensitive data against current and future cyber threats, including attacks enabled by quantum computers. Our technology enables organizations to generate, distribute, and manage encryption keys securely across existing fiber-optic networks.

HEQA's modular portfolio supports deployment in point-to-point and multi-site network architectures and integrates with existing encryption, network, and security infrastructure. It is designed for telecom operators, financial institutions, government and defense organizations, data centers, and other critical-infrastructure environments.

By combining advanced quantum key distribution (QKD), centralized management, and flexible integration capabilities, HEQA helps customers move from laboratory testing and proof-of-concept projects to scalable, operational quantum-safe networks—while preserving their existing infrastructure investments.

## ScreenStop

screenstop
THE SCREEN DLP COMPANY

Screen DLP | Stop Data Leask from Your Screen

https://screenstop.co/

### Categories

- Application and Website Security
- Anti-Fraud
- Authentication and IAM
- Data Protection Encryption and Privacy
- End Point Security
- DLP

### Profile

ScreenStop is an Israeli cybersecurity company, based in Haifa, that created the Screen DLP category: data loss prevention for what appears on the screen. Traditional DLP protects data on the network and in storage, but not the moment it is displayed and can be photographed by a phone or seen over a user's shoulder. ScreenStop's on-device software turns the endpoint's own webcam into a security sensor. It detects a phone aimed at the screen, a second viewer, or an unattended workstation, and responds in real time by blurring or locking the screen and logging the event for audit. All processing runs locally and on-premises; no video leaves the customer's environment. The product is in production with a global enterprise customer, with trials under way in banking, gaming and contact centers. Technology is patent-pending.

The solution:
On-device Screen DLP: the endpoint's webcam detects phones, shoulder-surfers and unattended screens, then blurs or locks the screen in real time and logs the event. It runs on-premises, with no cloud.

# Orca Security

Command Your Cloud | Identify, Prioritize, and Remediate Risks

https://orca.security/

**Categories**

- Application and Website Security
- Cloud and Infrastructure Security
- AI

**Profile**

Orca enables organizations to make cloud security a strategic advantage.

With the most comprehensive coverage and visibility across multi-cloud environments, the agentless-first Orca Platform unites teams to eliminate complexities, vulnerabilities and risks.

Backed by Temasek, CapitalG, ICONIQ Capital, Redpoint Ventures and others, Orca is trusted by hundreds of organizations, including SAP, Gannett, Autodesk, Unity, Lemonade and Digital Turbine.

# Zeroport

Non-IP remote access. Malware stays out, your data stays in

zeroport.com

## Categories

- Network Security
- OT and Industrial Control System
- AI
- Remote Access

## Profile

Zeroport replaces VPN and ZTNA with a fundamentally different architecture: a hardware device at the organization's network edge that converts all traffic into analog signals. Only pixels leave the network. Only mouse and keyboard commands enter it. No IP packets ever cross the boundary. This makes data exfiltration and malware injection architecturally impossible. Not access-controlled,

but physically prevented. Stolen credentials, zero-days, and compromised sessions cannot reach internal assets.

Zeroport delivers zero-latency, scales to enterprise-wide concurrent sessions, and eliminates the CVE attack surface that makes VPN and ZTNA a liability. It serves highly sensitive sites (defense, intelligence, critical infrastructure), distributed enterprises replacing legacy VPN, OT/IT bridging, and third-party contractor access. The remote access market is $93.6B in 2026, with 65% of enterprises actively planning VPN replacement. Zeroport is the only technology that makes remote access breach-proof by design.

# Modelyo

The cloud runs your sensitive workloads but never sees them/Sovereign confidential cloud for AI agents and sensitive workloads..

https://modelyo.com

**Categories**

- Cloud and Infrastructure Security
- Data Protection Encryption and Privacy
- End Point Security
- LLM
- AI
- Confidential Computing
- Sovereign Cloud, Secure AI Agents
- Cyber Resilience & Disaster Recovery

**Profile**

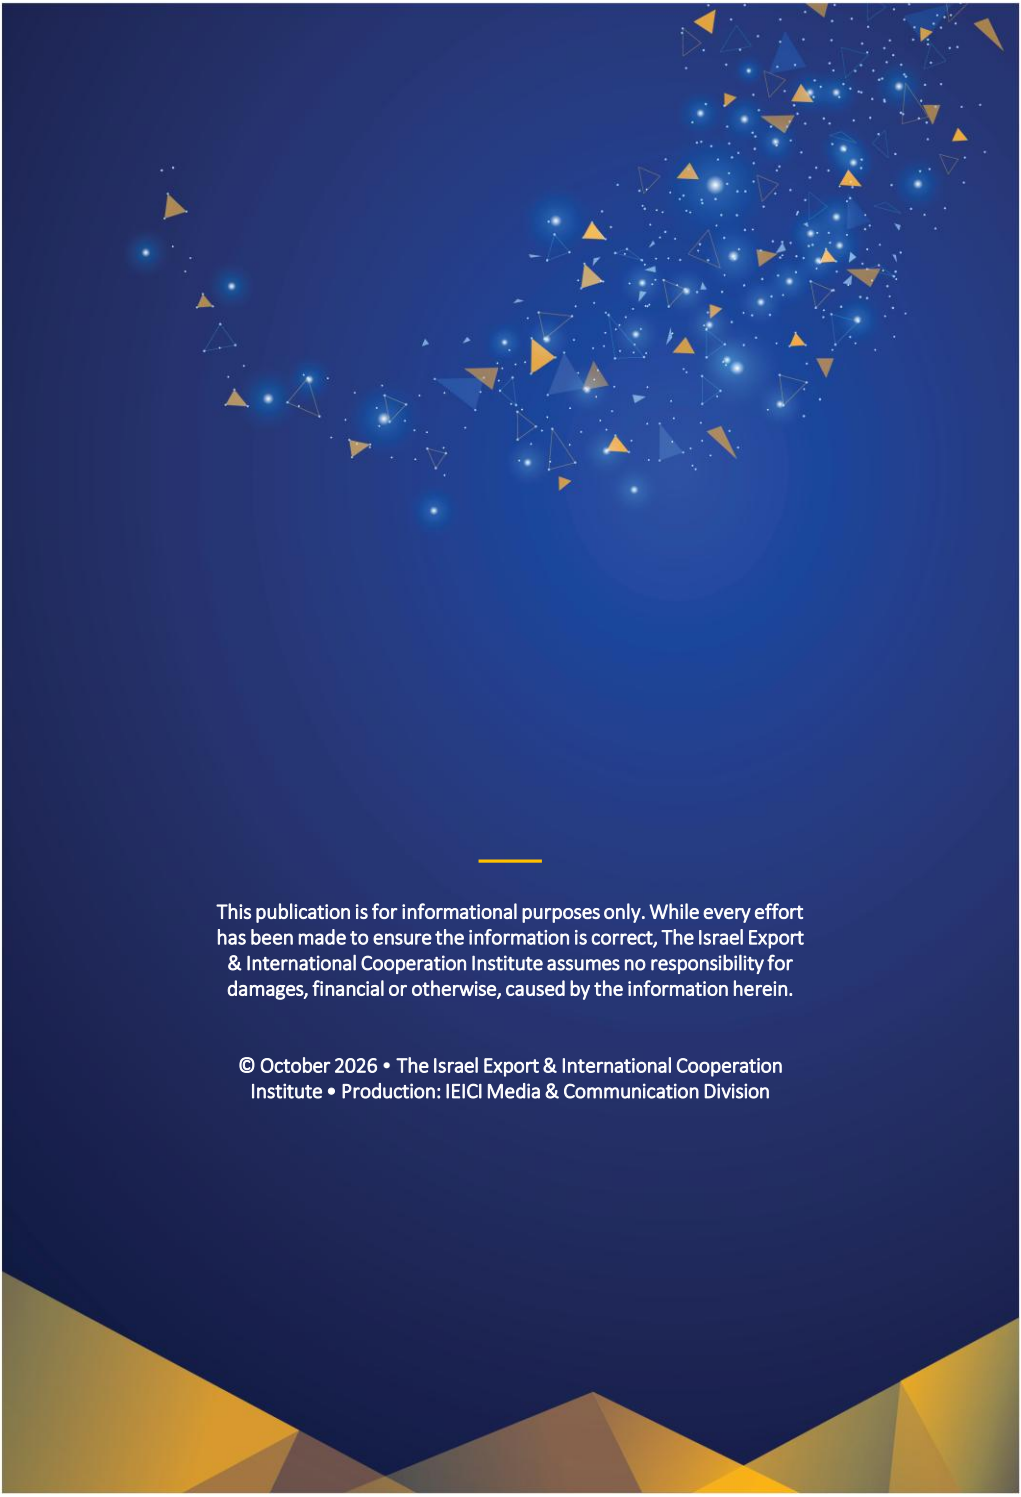

Modelyo is an Israeli sovereign confidential cloud. Organisations run sensitive applications, data and AI on public cloud, a partner's data centre or their own infrastructure, without surrendering control of data, keys or trust. Data stays protected even during processing, every environment is verified before receiving keys and re-verified while running, and operators and Modelyo itself cannot read protected data.

– Confidential AI & secure agents: the complete confidential environment to deploy and scale AI agents, not just encrypted inference: models, RAG, databases, storage, Kubernetes, APIs, memory and credentials.

– Sovereign confidential cloud: customer-held keys, independence from any single cloud provider, scalable managed services, and trusted recovery that holds even when production is compromised.

Approved by the Israel National Cyber Directorate and Israeli Ministry of Defense for classified workloads in the public cloud. In production in defence, government and finance. ISO 27001, SOC 2 Type 2, CCC member.

Seeking Korean partners and pilots for confidential AI, agents and sovereign cloud.
